DETAILED ACTION

1. The Applicant's amendment filed July 1, 2009 was received. Claims 1-14 were amended. Claims 15 and 16 were added. Support for the claim amendment and new claims can be found in figures 1, 2A, and 2B of applicant's specification.

Claim Objections

2. The claim objections on claims 7-9, 12, and 14 as being improper multiple dependent claims is withdrawn because applicant has amended the claims to remove the improper multiple dependency.

Claim Rejections - 35 USC § 102

3. The claim rejections under 35 U.S.C. 102(b) as being anticipated by Kuwabara (JP 2000-067885) on claims 1-5, 7, 10, 11, and 13 are withdrawn because independent claim 1 has been amended.

Claim Rejections - 35 USC § 103

4. The claim rejections under 35 U.S.C. 103(a) as being unpatentable over Kuwabara on claims 1-7, 10, 11, and 13 are withdrawn because independent claim 1 has been amended.

Reasons for Allowance

5. Claims 1-16 are allowed. The invention of independent claim 1 recites A feed plate of at least one fuel cell which includes: apertures for feeding of fuel, oxidizer and coolant fluid; Two opposite faces on at least one of which there are the circulation channels for the oxidizer, at least one refrigeration channel located on the same face or faces as that with the channels for circulation of the fuel or oxidizer, so as to be coplanar with these first circulation channels, wherein the first channels for circulation respectively of the fuel and oxidizer are located on both faces of the plate, with refrigeration taking place on both faces of the plate, so that the plate then constitutes a bipolar plate, with one single refrigeration channel being located on both faces and, as a consequence, having several through passages in the plate, from one face to the other, as well as branches, and wherein said apertures for feeding coolant fluid comprise an inlet for the coolant fluid and an outlet for the coolant fluid, said inlet and outlet being in fluid communication with the several through passages via refrigeration channel.

The prior art of record, Kuwabara, cited in the previous action, teaches a separator plate (1, feed plate), which has an oxidant gas inlet manifold (6a, oxidizer aperture), a fuel gas manifold (7a, fuel aperture), and a cooling-water manifold inlet (5a, cooling water aperture). Kuwabara further discloses circulating water flow ways (4, refrigeration channel) that is located on the same face as the oxidant gas passage (2, oxidizer circulation channel), each being coplanar with one another (see fig. 1; par. 28-34). In addition, Kuwabara teaches that the oxidant gas passage (2, oxidizer circulation channel) and the fuel gas flow route (3, fuel circulation channel) are located on opposite faces of the separator (see fig. 1). Kuwabara discloses that the circulating water flow

ways (4, refrigeration channel) is on both faces of the separator plate (see fig. 4, #4a). The single refrigeration channel recited in claim one is interpreted to mean the network of refrigeration channels on both faces of the separator. Kuwabara et al. teaches that the water flow ways (4, refrigeration channel), have a cooling-water flow ways manifold inlet and outlet (5a and 5b, inlet and outlet), wherein the cooling water flow ways are disposed from one face to another and have branches (fig. 1 depicts the cooling water flow ways with branches). However, Kuwabara does not teach that the refrigeration channel which is located on both faces has several through passages in the plate, from one face to the other.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
